SECTION I

GENERAL

### Local Training of Health Center Personnel

Reference is made to Public Health and Welfare Weekly Bulletin #75 relative to the training of Health Center personnel. The urgentneed for training of personnel already on duty in Health Centers, as well as those newly appointed is recognized. While every effort should be made to provide early in-service training at the local level, this training must be done in a thorough and proper manner if the desired results are to be obtained. Lectures alone are not sufficient, they must be supplemented by demonstrations and practical application.

For this reason it is advisable to place special emphasis upon completion of the Model Health Center's facilities as soon as possible. The model must be fully staffed with personnel who are, themselves, capable of receiving training and acting as instructors for the training of personnel of all other Health Centers. When the personnel of the Model Health Centers are familiar with their jobs then they should be utilized to teach the personnel of other health centers by the practical and accepted methods of (1) explanation, (2) demonstration and (3) application.

Little will be gained by holding formal lecture courses for Health Center personnel in general, until the lectures can be supplemented by demonstration and application, under supervision, in the Model Health Center or other properly functioning Health Centers.

### Technical Bulletin

The following Public Health and Welfare Technical Bulletin is enclosed with this Weekly Bulletin:

Title: Supplementary School Lunch Program

Short Title: TB-PH-WEL-12

SECTION II

PREVENTIVE MEDICINE DIVISION

### VD Control

Venereal disease is still the most prevalent infectious disease among adults. In order to insure the success of the nation-wide control program, close liaison should be maintained with Japanese prefectural VD control personnel.

As an aid in determining future plans, it is essential that the Military Government Health Officer know; (1) what the prefectural VD Control program is (present and future) and (2) what personnel and facilities (Public clinics, health centers, hospitals, and laboratories) exist for carrying out the program.

#### SECTION III

#### MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 21 May shows a total of 3,448 hospitals with bed capacity of 210,482, of which 103,940 were occupied. During this period, 318,254 out-patient treatments were rendered.

Bestricted

#### SECTION IV

### VETERINARY AFFAIRS

# Animal Diseases

The following outbreak of animal disease were reported by the Ministry of iculture and Forestry for period 5-11 June.

Prefecture	Disease	No. of Cases
Aomori	Swine erysipelas	2
Nagano	The state of the s	1
Chiba	H H	1
Tokyo	Anthrax	1

Note: The Anthrax case occured in a dairy furnishing milk to the Metropolitan area of Tokyo. Veterinarians in the Tokyo-to Public
Health Bureau instituted quarantine measures immediately and withdrew the milk supply temporarily until the incubation period is
over.

A representative of the Public Health and Welfare Section made a survey of peterinary activities in Shizuoka Prefecture. The survey disclosed that meat inspection was good; milk inspection was considered fair with deficiencies noted in dairy farm inspection due to poor transportation facilities; sea-food inspection was quite poor, but an overall program to improve the inspection service is now under way.

A small number of goats recently assigned to the Nagaizumi village were inspected and found to be in a much improved condition compared to the condition at the time of arrival in Yokohama. These goats were part of a gift of "The Heifers for Relief Committee".

### SECTION V

### SUPPLY DIVISION

### General

The Ministry of Welfare has issued supplemental instructions to all prefectural governors on the subject of "Management of Hospital Food Rationing", Public pealth Bureau, Ministry of Welfare Instruction No. 616 (Ko-Ho-Hatsu), dated 9 June. These instructions point out that the original directive of 12 February, Vice-prinister of Welfare Directive No. 12 (Hatsu-Ken), contemplated that each hospital properly organized to insure correct procurement and fair distribution of allocated food materials, but that the directive authorizes in no way the organization of unions or associations of semi-official or of any other nature in order to delegate responsibility for hospital rationing which properly belongs to the Government, at both national and local levels.

Hospital officials must understand that the handling of hospital rationing is their responsibility and that this responsibility cannot be delegated. Certain pospitals have complained that transportation is not available for moving rations from the rationing point to the hospital. In these cases there is no objection to the employment of transportation facilities on a contract basis, as distinguished from the organization of a union or association.

### pistribution

A total of 3,680 pieces of dusting and spraying equipment were distributed to 17 prefectures during the period 30 May - 5 June, under the direction of the ministry of Welfare as follows:

Bestricted

The following medicines are being removed from distribution control by Ministry of Welfare Ordinance No. 27, published 1 June. Supply of these medicines is considered to be adequate to meet ordinary needs and distribution control is no longer necessary.

Sulfapyridin tablet Sulfapyridin injection Sulfamin

Sulfamethylthyazol tablet Dextrose injection

Ordinance No. 27 will designate that the following items are to be included controlled medicines, effective the same date:

Hexylresorcinol tablets
Hexylresorcinol pills
Hexylresorcinol capsules

Amylresorcinol tablets
Amylresorcinol pills
Amylresorcinol capsules

#### SECTION VI

#### NARCOTIC CONTROL DIVISION

The April report of narcotic control activities from the Ministry of Welfare contains the following information:

Total registrants Arrests - Registered persons Unregistered persons	82,324 23 77
Convictions	
Registered persons	5
Unregistered persons	41
Thefts of narcotics	29
Losses by fire	3

penalties for registrants varied from ¥ 5,000 fine to eight months penal servitude. Penalties for non-registrants varied from ¥ 500 to two years penal servitude with 23 of the defendants being sentenced to penal servitude. Charges against 83 defendants, including 79 professional people eligible for registration, were dropped because of insufficient evidence. Eighty-two registrants were admonished and 10 minor violations were disposed of administratively.

The report also summarizes the activities of narcotic agents as follows:

Inspections of	registrants	2,953
Investigations	originated	657
Investigations	concluded	574
Investigations	not concluded	356

Information was obtained relative to 20 additional addicts including five who were arrested.

Investigation of the motor vessel, Eastern Saga, reported to have a contraband cargo of opium aboard was concluded with the cooperation of Occupation Force enforcement units and Japanese customs and narcotic officials. The vessel was thoroughly searched at three different ports and the crew was questioned relative to the report of contraband cargo. No opium was discovered. The coordinated investigation clearly showed the difficulty of any attempt to introduce narcotic contraband cargo into Japan.

#### SECTION VII

#### WELFARE DIVISION

## Mushu Welfare Training Course

The Ministry of Welfare has planned a seven day welfare conference to be held from 16 to 22 June, inclusive. Approximately 50 persons from the various prefectures in the Kyushu Region will attend. The meetings will be held at the Komin club, Kasugayama, Saga City, Saga Prefecture. The subjects to be discussed include: Outline of Social Work, Social Survey and Social Statistics, Methods of social Work, Daily Life Security and Disaster Relief, Child Welfare and the Responsibilities of Welfare Commissioners (Minsei-iin).

### child Welfare

"Child Welfare" page 12, Public Health and Welfare Weekly Bulletin No. 75 is amended to include the following:

Allowable Remuneration to Children's Agencies for Care of Children including Administrative Costs:

The Ministry of Welfare, Children's Bureau, issued Ji-Hatsu #257, dated 29 May, concerning the above subject.

Bistricted

The maximum limits per child, per day, for Kyogo-in are as follows:

Administrative expense - 334 Care of children - 24

Total ¥ 58

Maximum limits for Homes for Dependent, neglected, abused or feeble-minded children per child, per day, are:

Administrative expense = ¥ 28 Care of children = 24

Total ¥ 52

Administrative costs for these institutions have been based on the minimum standards of personnel, etc., which will be required of them.

### Lying-in Agency

Payment is limited to cost of care, delivery costs, physicians costs, etc.

Foster home care - amount for one person per day under present Daily Life Security Law allowances.

Mother's and Children's Home - up to ¥ 1.35 per day per person for all persons in the institution.

Day Nursery (year round only) - up to ¥ 1.35 per day per child for all children. There is no provision for temporary or seasonal day nurseries. Homes for Physically Handicapped and Weak Children (permanent homes only) up to ¥.8 per day per child for all children.

Temporary Shelter Care (Article 33 of the Daily Life Security Law)

Administrative cost - ¥ 10 per day per child Care of children - ¥ 27 per day per child

Consigned Temporary Care where no temporary shelter is operated.

No administrative cost. Care of children - ¥ 24 per day per child.

Administrative costs for the above agencies may be adjusted upon completion of the proposed minimum standards for children's institutions.

A committee is now working on a standard bookkeeping procedure for all institutions which will be provided for their use as soon as is possible.

Welfare Officers are encouraged to give surveillance to the uses to which administrative allowances are put in individual institutions and to report interesting observations through channels.

## Monthly Public Assistance Figures - April

The Ministry of Welfare has submitted the following national totals for the month of April 1948. Figures for March 1948 and for April 1947 are given for purpose of comparison.

	April 1948	March 1948	April 1947

## correction - Children's Bureau Survey of Orphans

Weekly Bulletin #71, dated 3 - 9 May, page 9, shows a total of male orphans of 68,478. The correct total of male orphans is 68,487.

## physically Handicapped Program

The first of 12 institutions for the handicapped in Japan opened in Tokyo, 7 June. It is named the Ohara-Ryo and accommodates 79 trainees and 37 members of their families.

Austricted

# Kestricted

Most of the accommodated are amputees and they will be trained in such crafts as: radio repair, dress making, watch repair, printing, shoe repair, wood work, electrical hand work and machine work of various types.

Out of the 79 trainees, 56 young ex-service personnel and civilians, formerly connected with the army, are included in the training, while 23 are civilians with no former army-navy background.

The program is slanted towards the age group, 20 - 40 years, and it is not surprising to find that the majority of handicapped needing this training are ex-service personnel. However, those receiving this training are to be based upon the overall needs of both ex-servicemen and civilians alike.

The numbers of physically handicapped in Tokyo-to as reported by welfare officials are:

Ex-servicemen and civilians formerly in the Armed Forces - 2094 Civilians not connected with Armed Forces - 738

A large former army barracks located on the property of the Second National Hospital in Tokyo has been renovated and equipped for this training institution. It is newly painted and all equipment has been renovated. It is equipped with a central kitchen, dining room and bathing facilities.

The facilities of the Second National Hospital will be used for necessary Medical examinations and treatments.

The present course of training will take approximately 8 months.

### Junior Red Cross Leadership Training Centers

Reference: Public Health and Welfare Weekly Bulletins No. 66 (for the period 29 March - 4 April) and No. 72 (for period 10 - 16 May).

The following information, in brief cutline, is a report on the progress of astablishing "Leadership Training Centers" (Camps) this Summer as reported in a recent meeting of the Junior Red Cross Advisory Committee:

- a. Approval of camp sites and dates:
  - (1) Okayama Training Center at Tamano, Okayama Prefecture 25 31 July
  - (2) Gora Training Center, Kanagawa Prefecture, 15 21 August.
    Note: The students will arrive on Sunday previous to the
    Monday on which the actual work of the camp will begin and
    they will leave on Saturday after the close of the camp on
    Friday night.
- b. Budgets for the two Centers:
  - (1) Food ¥ 150 per day per person. 55 students will attend 6 days. 12 faculty members will attend 8 days. Average of 3 guests allowed each day.
    - (a) Students (55 in each Center) 55 x 6 x 2 x ¥150 = ¥99,000
      - (b) Faculty (12) 12 x 8 x 2 x ¥150 = ¥28,800
      - (c) Guests (3 per day permitted to attend)
        3 x 6 x 2 x ¥150 = ¥5,400

Total Food Cost - ¥133,200

- (2) Room ¥50 per day, 6 days for students, 8 days for faculty, 2 Centers
  - (a) Students (55 in each Center) 6 x 2 x 55 x ¥50 = ¥33,000
  - (b) Faculty (12) 8 x 12 x 2 x ¥50 = ¥9,600
  - (c) Guests (3 per day permitted to attend) 3 x 6 x 2 x ¥50 = ¥1,800

Total Room Cost - ¥44,400

- (3) Miscellaneous (2 Centers)
  - (a) Mimeographing and paper for bulletins used in teaching ¥6,000
  - (b) Rent for boat used in Water Safety and other expenses necessary for teaching materials ¥18,000
  - (c) Mail and telegrams ¥6,000
  - (d) Shipping materials to Centers such as blankets, sheets, mosquito nets and transportation of food, \$20,000

Total Cost for Miscellaneous Items - ¥50,000

- (4) Transportation (12 teachers)
  - (a) Gora Center (average estimate per person for transportation to Gora ¥600
  - (b) Okayama Center (average estimate per person for transportation to Okayama - ¥4,250) 12 x ¥4,250 = ¥51,000

Total cost for transportation - ¥58,200

- (5) Awards to Teachers (estimate of ¥1,000 each) 12 x 2 x ¥1,000 = ¥24,000
- (6) General Services
  - (a) General maintenace of buildings
  - (b) Cleaning of buildings before Center opens
  - (c) Errand help

Total for General Service for two Centers - ¥20,000

Summary:

Food ¥133,200 Room 44,400 Miscellaneous 50,000

Transportation 121,884 (including transporation of

students)

Awards
General Services 24,000
Total ¥ 393,484

Note: It was agreed at an Advisory Committee Meeting that the cost of food and housing would determine the tuition per student. The total cost of housing and food is \(\frac{\pmathbf{Y}}{177}\),600 and this divided among 110 students will make the tuition fee per student approximately \(\frac{\pmathbf{Y}}{1}\),600.

### c. Courses to be studied at Center

- (1) Junior Red Cross Organization and Membership
  - (a) What is Red Cross? Brief History. Discussion of thoughts and quotations dealing with goodwill, charity, humanitarian feelings, and the Red Cross ideals.
  - (b) How to become a Junior Red Cross member. Purposes of Junior Red Cross. Significance of Junior Red Cross membership.
  - (c) How to organize a Junior Red Cross Corps in School according to democratic principles and good parlimentary procedure.
- (2) Junior Red Cross Community Activities

This will include:

- (a) The study of how to make surveys of community needs.
- (b) How to determine and evaluate good Junior Red Cross projects.
- (c) How to integrate Junior Red Cross activities with regular classroom work.
- (3) Safety Services

To include safety and accident prevention information applicable to Japanese life.

(4) Home Nursing and Nutrition

To include a combination of the two subjects which will give basic health knowledge that is practical and applicable.

(5) School Correspondence Project.

Study of National and International plan for exchanging school correspondence albums with schoels in Japan and in other countries.

(6) Crafts

Making of articles which may be used in welfare institutions from native raw materials which students bring with them.

(7) English conversation

To be arranged during free periods.

L'estricted

Note: One month previous to the date of center the faculty will meet together to develop the units of work to be taught in each of the above courses. The faculty will assist in preparing the daily schedule. Only four hours each day will be given to study and discussion. There will be planned free periods and recreation. Students will share in the planning of their recreation. In fact, students will operate the Center with adult leaders' guidance.

### d. Faculty (tentative)

Consultant and Junior Red Cross Chief have plans that the following will be the faculty of the Center:

 Mr. S. Honjo, Chief, Japanese Junior Red Cross
 Major Jack Moreman, Assistant Exec. Officer, CI&E (Dean and Co-Dean of Center)

(3) Mr, Kashiwagi, Supervisor, Schools of Kanagawa Prefecture (Junior Red Cross Activities)

(4) Mr. Takata, Social Studies Teacher, Akasaka School (Junior Red Cross Activities)

(5) Mr. Eiichi Komori, Chief, Safety Services (Safety and Accident Prevention)

(6) Miss Hayashi, Chief, Nursing Services (Nursing and Nutrition)

(7) Mrs. Kobayashi, Nutritionist, Joshi Dai (Nursing and Nutrition)

(8) Miss Shiroyama, Junior Red Cross (School Correspondence, International Project)

(9) Mrs. Goto, Teacher at Shoei School (School Correspondence. International Project)

Correspondence, International Project)
(10) Crafts teacher - to-date not appointed.

#### SECTION VIII

#### SOCIAL SECURITY DIVISION

### General

In further supplementation of earlier information on current statistical reporting requirements for National Health Insurance (see Public Health and Welfare Weekly Bulletins Nos. 73 and 75) the Insurance Bureau, Ministry of Welfare, has informed Public Health and Welfare Section of a new report to be compiled for the first time in every prefecture in June.

This is to be a monthly report to the prefectural Insurance Section by every public Health Nurse employed by a National Health Insurance association. After consolidating these individual reports, the prefectural Insurance Section is to send the consolidated report to the Ministry of Welfare not later than one month after completion of the month reported on. Each prefecture must decide for itself when the individual reports shall be due at the prefectural office. The following information is required to be forwarded to the Ministry:

- 1. Number of associations reported on;
- 2. Number of Public Health Nurses reporting;
- 3. Number of insured per one Public Health Nurse;
- 4. Number of Public Health Nurses who failed to report;

Bestrictal

- 5. Total hours and percent of total working time spent, out of each business day, on each of the following activities:
  - a. Home visits, total and broken down into visiting time, travel time, and preparation of records;
  - b. Consultation in the office, total and broken down into consultation proper, assistance to the doctor, preparation, and cleaning up;
  - c. Outside consultations ( itinerant clinics), total and broken down into consultation proper, assistance to the doctor and travel time;
  - d. Group education, total and broken down into guidance and travel time;
  - e. Meetings and conferences, total and broken down into staff education, study and attendance, practical (on the spot) observation;
  - f. Other activities, total and broken down into investigation and statistics, communications, health preservation business (e.g. filling out of applications for special food for nursing mothers etc.) association business, conferences, and official trips outside the village;
  - g. Grand Totals
- 6. The total number of business days spent on:
  - a. Home visits, total number of homes and of cases and broken down according to the following categories: maternity case, unweamed infant, pre-school child, student, adult, investigation, control of communicable disease, not home, death, other.
  - b. Visits on special diseases: tuberculosis, venereal disease, infectious disease, mental disease.
  - c. Communication visits, total number and broken down according to the following categories: school, private doctor or dispensary, Health Center, member of welfare committee, workshop and store, social work institution, other.
  - d. Grand Totals.

Reference is made also to the application and report required from all National Health Insurance associations desiring a national subsidy for the establishment of a clinic or hospital under their direct ranagement. A translation of that form as required by Insurance Bureau, Ministry of Welfare Instruction # 284, (Ho-Hatsu No. 284) of 1 March was given as enclosure No. 1 to Public Health and Welfare Weekly Bulletin No. 67. Since no definite deadline was attached to that report, several associations planning to establish clinics or hospitals and desiring national subsidies therefor may have fallen behind and should be encouraged to make application promptly if such subsidy is desired for the current fiscal year.

Finally, reference is made to national subsidies payable to National Health Insurance associations hit by natural disasters such as floods, etc. (See Public Health and Welfare Weekly Bulletin No. 64) The reporting requirements contained in the application form to be filed by associations wishing to qualify for such subsidies will be listed in the next issue of Public Health and Welfare Weekly Bulletin and will complete all regular statistical and related reporting done currently under the National Health Insurance Program.

Hatuatel

## Health Insurance

Attention is invited to Ho-Hatsu No. 548 and No. 552 dispatched by the Insurance Bureau, Ministry of Welfare, to the prefectural governors and noted in Public Health and Welfare Weekly Bulltin No. 71 for the period 3 - 9 May. They contained information regarding new procedures for obtaining more prompt payment of claims presented by insurance doctors for medical care given to patients insured under society-managed Health Insurance.

The Central Committee for the Guidance of Insurance Doctors concurred in the ection taken by the Ministry of Welfare in this matter and urged that the Prefectural Committees for the Guidance of Insurance Doctors take an active part in bringing about cooperation on the part of all doctors.

#### SECTION IX

MEMORANDA TO THE JAPANESE GOVERNMENT

None .

Cranford F. SAMS

CRAWFORD F. SAMS
Brigadier General, Medical Corps.

- Incls: 1. Report of Cases and Deaths from Communicable and Venereal Diseases in Japan, week ended 5 June 1948.
  - 2. Number of Cases and Rates of Communicable and Venereal Diseases in Japan for 5 week period ended 29 May 1948.

# DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES IN JAPAN FOR THE WEEK ENDED 5 JUNE 1948

During the twenty-third week ended 5 June 1948, there were reported 13,506 cases of communicable disease compared with 12,726 in the previous week. Only Saitama Prefecture (compared with 2 prefectures last week) failed to submit a report for the following 11 communicable diseases: diphtheria, dysentery, typhoid fever, paratyphoid fever, smallpox, typhus fever, cholera, scarlet fever, epidemic meningitis, Japanese "B" encephalitis and plague. Three prefectures (Miyagi, Niigata, and Okayama) did not send in reports this week for measles, whooping cough, tuberculosis, pneumonia, influenza, and malaria. Six prefectures failed to submit reports on these six diseases last week.

Approximately 93 percent (12,601) of the total cases (13,506) recorded for the 17 communicable diseases included in this report were due to tuberculosis, pneumonia, measles, whooping cough and influenza. Only one of these five diseases (pneumonia) decreased from last week's level.

Tuberculosis cases (8,120) in the current week were 7 percent greater than the number (7,581) reported last week, but were less than the totals recorded in the two previous weeks. In the twenty-third week of 1947 there were 8,095 cases. The current and cumulative case rates per 100,000 population per annum were 543.7 and 447.9 respectively.

There was little change in the incidence of pneumonia. In the current week there were 1,646 cases compared with 1,676 last week. The current total was a little more than one third the number (4,432) reported in the corresponding week of 1947. The current and cumulative case rates were 110.2 and 234.8 respectively.

Measles cases (1,801) remained approximately the same as last week (1,791). In the corresponding week of 1947 there were 9,405 cases - more than 5 times the current number. The current and cumulative case rates were 120.6 and 92.5 respectively.

The incidence of whooping cough continued its very irregular course to reach a new high for the year. Currently there were 983 cases compared with 793 last week - an increase of 24 percent. This was approximately one fifth the number (4,570) recorded in the twenty-third week of 1947. The current and cumulative case rates were 65.8 and 53.4 respectively.

There were 51 cases of influenza currently compared with 30 cases last week and 80 cases in the twenty-third week of 1947. The current case rate (3.4) was a little more than half the cumulative rate (6.2).

The remaining 12 communicable diseases accounted for 905 cases and 85 deaths currently compared with 855 cases and 86 deaths last week.

Diphtheria continued its general downward trend. Currently, there was a 3 percent reduction in the number of cases, from 252 to 244 while deaths declined from 16 to 13. The number of cases this week was 60 percent less than in the twenty-third week of 1947 (614) and 73 percent less than the number (891) in the corresponding week of 1946. The current and cumulative case rates were 16.3 and 24.5 respectively. Corresponding death rates were 0.9 and 2.4.

The number of dysentery cases (183) this week was 40 percent higher than previously (131). Deaths increased from 32 to 38. Increases were recorded in 23 prefectures and decreases in 13 prefectures. The current total was approximately 46 percent of the number of cases reported in the corresponding weeks of 1947 and 1946 when there were 398 and 393 cases respectively. The current and cumulative case rates were 12.3 and 4.8 respectively. Corresponding death rates were 2.5 and 1.1.

For the first time in six weeks, a reduction was recorded in typhoid fever. Total cases this week (160) were nearly 24 percent less than in the preceding

week (209). Deaths (23), however, were slightly higher than previously (20). In the corresponding week of 1947 there were almost twice as many cases (293) and in the same period of 1946 the number (1,045) was six and a half times the current figure. The current and cumulative case rates were 10.7 and 8.3 respectively. Corresponding death rates were 1.5 and 1.0.

Paratyphoid fever (69 cases and 3 deaths) remained about the same as previously (62 cases and 7 deaths). More than 40 percent (29 cases) of all cases occurred in Tokyo-to while 18 additional prefectures reported having from 1 to 7 cases each. The total this week (69) was 20 percent less than in the corresponding period of 1947 (86) and 68 percent less than in the twenty-third week of 1946 (215). The current and cumulative case rates were 4.6 and 2.8 respectively. Corresponding death rates were 0.2 and 0.1.

One case of smallpox (in Saga Prefecture) was reported this week compared with none previously. No deaths have been reported this year. In the corresponding weeks of 1947 and 1946 there were 16 and 303 cases respectively. Both the current and cumulative case rates were 0.1.

Only 5 cases and no deaths were reported for typhus fever this week compared with 8 cases and 1 death last week. The prefectures where cases were reported were Ibaraki, Tokyo, Kanagawa and Osaka. This contrasts with 35 cases in the twenty-third week of 1947 and 853 cases in the corresponding period of the opidemic year 1946. The current and cumulative case rates were 0.3 and 1.1 respectively. The cumulative death rate was 0.1.

Malaria continued its general upward trend. The total number of cases this week (163) was 81 percent higher than previously (90). No deaths were reported in either week. As usual, Shiga Prefecture had the largest number of cases (77). Hiroshima and Kagoshima had 23 and 11 cases respectively. Twenty-two additional prefectures had from 1 to 7 cases each. Increases in the number of cases were recorded in 19 prefectures. The national total was less than two thirds of the number (253) reported in the corresponding week of 1947 and only 43 percent of the figure (379) for the same period of 1946. The current and cumulative case rates were 10.9 and 4.6 respectively. The cumulative death rate was less than 0.1.

Scarlet fever cases decreased for the third consecutive week. The current number (57) was 21 percent less than in the preceding week (72). No deaths were reported in either week. Nearly half (22) of the prefectures reported they had no cases while the remaining prefectures reported from 1 to 7 cases each. The total this week was 21 percent less than in the corresponding week of 1947 (72) and about the same as in the twenty-third week of 1946 (56). The current and cumulative case rates were both 3.1. The cumulative death rate was less than 0.1.

Epidemic meningitis cases declined for the second consecutive week, from 31 previously to 23 currently and deaths were reduced from 10 to 8. From 1 to 5 cases were reported in 14 prefectures. The current total of cases was less than a third of the number (72) reported in the corresponding week of 1947 and approximately half the figure (44) for the twenty-third week of 1946. The current case rate (1.5) was less than half the cumulative rate (3.2). The current and cumulative death rates were 0.5 and 0.8 respectively.

No cases of suspect Japanese "B" encephalitis were reported in the current week compared with 1 in the corresponding week of 19/7 and 2 in the same period of 1946. The cumulative case rate for this year was less than 0.1.

There continued to be no cholera or plague.

The current and cumulative number of cases of syphilis were 4,384 &105;512 respectively; for gonorrhea, 4,482 and 113,757 respectively; and for chancroid, 654 and 20,566. There was a decrease in syphilis compared with the preceding week but increases were recorded for gonorrhea and chancroid. The current number of reported cases of syphilis was 30 percent higher than in the corresponding week of 1947 (3,384). Current totals for gonorrhea and chancroid, however, were less than in the twenty-third week of 1947 when there were reported 4,646 cases of gonorrhea and 876 cases of chancroid. The current and cumulative case rates for these diseases were: syphilis, 293.5 and 307.2 respectively; gonorrhea, 300.1 and 331.2; and for chancroid, 43.8 and 59.9.

### SUMMARY REPORT OF CASES AND DEATHS FROM COMMUNICABLE DISEASES IN JAPAN

- 1. There were no cases or deaths reported for plague.
- 2. Rates are the number of cases or deaths per 100,000 population, enumerated on 1 October 1947, and are computed on an annual basis.
- 3. A dash ( ) indicates that no cases or deaths were reported and that the case or death rate was zero.
- 4. A rate of 0.0 indicates that there were some cases or deaths but that the rate was less than 0.1.
- 5. "NA" indicates data are not available.
- 6. "M." indicates that no report was received.
- 7. \* Cumulative figures adjusted for delayed and corrected reports.

### I IGEST OF MONTHLY REPORT OF COMMUNICABLE I ISEASES IN JAPAN FOR THE FIVE WEEK PERIOD ENTED 29 MAY 1948

Turing the five-week period ended 29 May 1948, the \*12 acute communicable diseases included in this report accounted for 4,399 cases and 420 deaths. Recreases from the April rates were recorded for diphtheria, typhus fever and epidemic meningitis; increases occurred in dysentery, typhoid fever, paratyphoid fever, malaria and scarlet fever. Smallpox remained the same. There was no Japanese "B" encephalitis, cholera or plague. \*\* Rates for all diseases were either the same or less than in May 1947.

Piphtheria showed the usual seasonal decline in May. The case rate fell nearly 15 percent from 23.4 in April to 20.1 in May while the death rate declined more than 20 percent from 1.9 to 1.5. This was the lowest case rate ever recorded for May except in 1922 when the rate was the same (20.1) and in 1923 when the rate dropped to 19.8. It was less than half the rate (42.8) in May 1947 and only 35 percent of the figure (57.5) in the same month of 1946. Prefectural rates ranged from 7.1 in Tottori to 53.6 in Saga. Despite the over all decrease in the diphtheria case rate, increases were recorded in 17 prefectures, most of which were in central Honshu. Eight prefectures had rates exceeding the national average by 50 percent or more. These were Hokkaido, Akita, Miyagi, Niigata, Ishikawa, Saga, Oita and Miyazaki. At the other extreme, six prefectures had rates that were less than half the national figure. These were Chiba, Toyama, Aichi, Shiga, Osaka and Tottori.

As usual, dysentery increased during May. The case rate (8.1) was more than 60 percent higher than in April (5.0) and the death rate (1.8) was 38 percent higher than previously (1.3). These percentage increases were not as great, however, as in previous years. The current case rate was the lowest recorded for May since 1922 when the rate was 7.3. It was 45 percent less than in May 1947 (14.6) and 55 percent lower than in the corresponding period of 1946 (17.9). Prefectural rates varied from zero in Nara and Wakayama to 26.5 in Miyazaki. Some increase over April was recorded in 36 prefectures. Pates exceeding the national average by 50 percent or more were recorded in six prefectures which together accounted for nearly a third of all cases. These prefectures were Iwate, Iamagata, Tokyo, Ehime, Nagasaki, and Miyazaki. Twelve prefectures had rates that were 50 percent or less of the national figure.

Typhoid fever usually increases steadily from a low point in February or March to a high in August or September. The current case and death rates (12.5 and 1.4 respectively) were approximately 75 percent higher than the corresponding rates (7.1 and 0.8) in April. However, they were the lowest rates ever recorded for May. The case rate was little more than two thirds of the rate (18.3) in May 1947 and less than a fourth of that (54.6) for the same period of 1946. Current Prefectural rates ranged from 0.6 in Kagoshima to 39.8 in Oita. Rates were higher than in April in 37 prefectures. Seven prefectures had rates that were 50 percent or more higher than the national figure and together accounted for 40 percent of all cases reported. These prefectures were Tokyo, Kanagawa, Gifu, Kyoto, Wakayama, Shimane and Oita. Rates in 14 prefectures were 50 percent or more lower than the national average. These prefectures were 40 percent or more lower than the national average. These prefectures were Aomori, Iwate, Ibaraki, Chiba, Shiga, Nara, Kagawa, Yamaguchi, and all the prefectures in Kyushu except Oita.

Paratyphoid fever follows much the same seasonal pattern as typhoid fever. This year the case rate rose more than 80 percent, from 2.4 in April to 4.4 in May and the death rate doubled, from 0.1 to 0.2. Although the case rates from January to April 1948 varied from 60 to 70 percent of the rates in the corresponding periods of 1947, the current rate was the same as in May 1947. This was nearly 60 percent less than the rate (10.7) in May 1946. Prefectural rates varied from zero in six prefectures (Yamagata, Ishikawa, Fukui, Nara, Tottori and Yamaguchi) to 23.6 in Tokyo. Nearly 60 percent of all cases reported were in seven prefectures where the rates were 50 percent or more higher than the national figure. These prefectures were Iwate, Gumma, Tokyo, Yamanashi, Shizuoka, Kyoto and Kochi. More than half (25) of the prefectural rates were 50 percent or more lower than the national average.

Turing May there were 6 cases of smallpox -- the same number as in April. No deaths have been reported this year. The current case rate was 0.1 contrasted with 1.2 in May 1947 and 30.2 in May 1946. The current cases were in Chiba (2) and 1 each in Wakayama, Hiroshima, Tokushima and Fukuoka.

The typhus fever case rate (0.5) dropped to a new low for the year in May. It more than 80 percent lower than in April when an outbreak in Osaka Prefecture was more the national rate to rise to 2.7. Only 1 death from typhus fever was recused in May, making the death rate less than 0.1 contrasted with 0.2 in April. ported in May, making the death rate less than 0.1 contrasted with 0.2 in April. The current case rate was approximately one-third of that (1.4) in the corresponding period of 1947 and only one half of one percent of the rate (91.7) in May of ing epidemic year, 1946. Currently there were from 1 to 8 cases in each of 16 prefectures and no cases in the remaining 30 prefectures.

Malaria continued its usual seasonal upward trend. The case rate rose 16 percent from 4.9 in April to 5.7 in May while the death rate rose from less than 0.1
cent of 1947 when it was 14.4. Prefectural rates ranged from zero in Miyazaki
Foreign Prefecture. More than 40 percent (183) of all cases reported (422) were in
the Prefecture. Only two other prefectures had rates that were even 50 percent
or more greater than the national average. These were Kagoshima and Fukui, where
or mates were 21.0 and 11.5 respectively. On the other hand, more than half (26)
of the prefectures had rates that were 50 percent or more below the national figure.

The scarlet fever case rate rose 14 percent, from 4.2 previously to 4.8 in May.

The death rate increased from less than 0.1 to exactly 0.1. The current case rate

nearly 15 percent less than in the corresponding period of 1947 (5.6) but 50

percent higher than in May 1946 (3.2). Prefectural rates varied from zero in seven

perfectures (Toyama, Ishikawa, Tokushima, Kochi, Kumamoto, Oita and Miyazaki) to

prefectures (Toyama, Ishikawa, Tokushima, Kochi, Kumamoto, Oita and Miyazaki) to

19.4 in Yamanashi. Half of all cases were reported in 7 prefectures having rates

in excess of the national figure by 50 percent or more. These were Hokkaido,

pochigi, Gumma, Tokyo, Yamanashi, Gifu and Shiga. Twenty prefectures had rates

that were less than half the national figure. Host of these were in the southern

part of the country and included all of the seven prefectures in Kyushu.

Epidemic meningitis usually begins to decline in May. This year the case rate propped nearly 40 percent from 4.4 in April to 2.7 currently. The April death rate (1.) was cut nearly half to 0.6 in May. The case rate was 60 percent less than in May 1947 (6.8) and slightly lower than in the corresponding period of 1946 (2.8). Nine prefectures (compared with seven last month) reported they had no instances of epidemic meningitis. These nine prefectures were Toyama, Ishikawa, Gifu, Shiga, wagawa, Kochi, Kumamoto, Oita and Miyazaki. The highest rate was 8.8 in Tokyo-te. More than half (104) of all cases were reported from five prefectures - Hokkaido, fukushima, Ibaraki, Tokyo and Osaka. The rates in these prefectures were 50 percent or more higher than the national rate and the number of cases in each varied from 10 to 42. An additional four prefectures (Miyagi, Akita, Fukui and Nara) reported rates that exceeded the National figure by 50 percent or more but the number of cases in each of these places ranged from 3 to 8.

The one case of suspect Japanese "B" encephalitis reported in Akita Prefecture in April remains the only case reported this year. In 1947 one case was reported in January and no further cases occurred until June.

There continued to be no cholera or plague.

\*\*\* Five additional communicable diseases accounted for a total of 68,192 mases during May. Tata on deaths are not available.

The tuberculosis rate increased 5 percent from 530.5 in April to 558.6 in May. This was less than 2 percent higher than the rate (548.7) in May 1947. Rates among the prefectures varied from 207.0 in Hyogo to 1,248.6 in Toyama. The rates of six refectures exceeded the national average by 50 percent or more. These were tokkaido, Tokyo, Kanagawa, Toyama, Shimane and Hiroshima. Together these six prefectures accounted for more than a third of all cases reported.

Pneumonia continued its usual seasonal decline. The case rate (150.8) in May as more than 40 percent lower than in April (256.3). It was 60 percent less than the rate (377.5) in May 1947). Prefectural rates ranged from 54.1 in Hyogo to 56.5 in Toyama. Nine prefectures recorded rates that were 50 percent or more ligher than the national rate and together accounted for 35 percent of all cases in country. These prefectures were Hokkaido, Fukushima, Niigata, Toyama, Ishikawa, 10ttori, Shimane, Hiroshima and Ehime.

Moasles continued its upward trend. The case rate rose more than 30 percent, from 106.5 in April to 139.4 currently. This was, however, less than a fourth of the rate (574.3) in May 1947. There was a wide range in prefectural rates, from 4.5 in Saitama to 918.8 in Okayama. Nearly 60 percent of all cases reported were in 11 prefectures where the rates were from one and a half to six and a half times the national figure. These areas included four neighboring prefectures in central Honshu -- Toyama, Ishikawa, Gifu and Fukui -- three neighboring prefectures in southern Honshu -- Tottori, Okayama and Hiroshima -- and all the prefectures in Shikoku -- Tokushima, Kagawa, Ehime and Kochi.

There was a 15 percent increase in the rate for whooping cough, from 52.0 in April to 59.6 in May. This was in striking contrast with the experience in the corresponding period 1947, however, when the rate (327.5) was approximately five and a half times the current figure. Prefectural rates varied from 8.6 in Kochi to 292.7 in Toyama. Seven prefectures reported rates that exceeded the national average by 50 percent or more and together accounted for nearly 35 percent of all cases. These prefectures were Gumma, Niigata, Toyama, Ishikawa, Fukui, Shimane and Fukuoka.

There was a 36 percent reduction in the influenza rate, from 7.7 to 4.9 in May. This was a little more than a fourth of the rate (17.9) in the corresponding Period of 1947. Fifteen prefectures reported no cases of influenza. The highest rate was 54.7 in Fukui. More than 75 percent of all cases were reported from ten Prefectures where the rates were from one and a half to eleven times the national rate. These prefectures were Niigata, Ishikawa, Fukui, Gifu, Aichi, Shiga, Tottori, Okayama, Hiroshima and Fukuoka.

The three venercal diseases accounted for a total of 53,675 cases. There were 24,081 cases of syphilis. The rate in May (322.5) was 17 percent lower than in April (390.4) but was 54 percent higher than the rate recorded in May 1947 (209.0). Prefectural rates ranged from 92.4 to 1,147.0.

A total of 25,672 cases of gonorrhea was reported. As in the case of syphilis, the case rate (343.8) was 17 percent lower than in April (412.9); however, it was only 15 percent higher than the reported rate (300.1) in May 1947. Rates among the prefectures ranged from 79.5 to 931.5,

Chancroid accounted for 3,922 cases. The rate fell nearly 30 percent, from 73.5 in April to 52.5 in May. This was slightly lower than the rate (55.0) for the corresponding period of 1947. The lowest prefectural rate was 5.5 and the highest was 319.8.

<sup>\*</sup> These diseases are diphtheria, dysentery, typhoid fever, paratyphoid fever, smallpox, typhus fever, malaria, cholera, scarlet fever, epidemic meningitis, Japanese "B" encephalitis and plague.

<sup>\*\*</sup> In making comparisons with other months, it should be noted that May 1947 and May 1948 included five week periods, whereas April 1948 included only four weeks. It should be noted further that the total population in 1947 was less than in 1948. For these reasons comparisons should be based upon rates rather than upon numbers of cases or deaths.

<sup>\*\*\*</sup> Tuberculosis, pneumonia, measles, whooping cough and influenza.

There were no cases or deaths reported for plague.

A dash (-) indicates that no cases or deaths were reported and that the case

or death rate was zero.

The monthly reports refer to 4 and 5 week periods: one asterisk (\*) indicates 4 week period and two asterisks (\*\*) indicate a 5 week period.

Rates are the number of cases or deaths per 100,000 population per annum. The 1947 rates are based upon the estimated population as of July 1947 and the 1948 rates are based upon the enumerated population 1 October 1947.

A rate of 0.0 indicates that there were some cases or deaths but that the rate Was less than O.1.
